Uncover the "Insider" Secrets to Understanding and Conquering the Commodities Market.

<DATE>

Dear Investor,

Let me first ask you a simple question. Are you a smart investor?

What's a "smart" investor exactly?

A smart investor buys value cheaply and holds it long-term. It's that simple. But it's certainly easier said than done, right?

It's easy to look *back*, spot value, and wish you'd been in on the ground floor. \$1,000 invested at the right time in **Wal-Mart, Dell, Microsoft**, or a number of other companies would be worth hundreds of thousands of dollars today.

If we'd only had the foresight to know those stocks would appreciate incredibly... *and* the foresight to hold on to them over the long-haul.

But why is it so hard to spot value early?

Because for any investment to be cheaply priced, even if there is tremendous underlying value (or potential value), it has to be ignored by almost everyone. It can't be "hot." It has to be off the radar. The herd can't have spotted the opportunity. That's exactly where commodities stand today — and due to the fact that supply and demand is out of whack, they're poised to take off. Commodities are completely off the radar screen of almost every investor.

If you're over 40, or watch late-night cable movies, your only exposure to commodities is likely to be **Eddie Murphy** and **Dan Aykroyd** outwitting the Duke Brothers in *Trading Places*. But the fact is the total dollar volume traded on the various commodities exchanges is actually *2-3 times greater* than the dollar volume of all stocks traded on U.S. stock exchanges. Actually - the difference is in reality even larger - because a tremendous volume of commodities trading takes place outside the commodities exchanges.

So why would you ignore an opportunity to buy value cheap and hold it long-term?

You shouldn't.

Introducing... “The Coming Boom in Commodities - and How You Can Profit from It” - by Brian Erickson
